US Citizen | +1 (765) 772-8560 | harisaiharish@gmail.com | hariharish.netlify.app | linkedin.com/in/hari-harish

EDUCATION

Purdue University

West Lafayette, IN

B.S. in Computer Science, Data Science, and Mathematics, Minor in Economics

Expected Grad: Dec 2027

- Scholarships & Recognitions: DS Outstanding Freshman of the Year, Dean's List (4x), Semester Honors (4x).
- Coursework: Algorithms, OS, Architecture, Machine Learning, Linear Algebra, Differential Eq, Calculus, Statistics

EXPERIENCE

Software Engineer Intern

Jun 2026 – Aug 2026

LangChain: Agentic Evals and Observability, DeepAgents, React, TypeScript

- Engineered production tracing infrastructure for 7 frontier coding agents. Exposed every llm call, tool, skill, and subagent invocation, in a hydrated form, with standardized metadata for debugging and observability. View blog.
- Launched LangSmith Custom Apps, enabling users to generate and deploy personalized vibe-coded dashboards directly on top of their trace data. Shipped to production and adopted by early enterprise customers.

Co-President

Jan 2026 – Present

Google Developer Groups @ Purdue: GCP, Firebase, Vertex, Kubernetes, BigQuery

West Lafayette, IN

- Organize campus-wide educational workshops, with industry-expert guest lecturers to broaden technical exposure.
- Oversee 3 year-long projects, directly mentor PMs, and steer project scope adjustments to maximize outcomes.

Founding Engineer

Aug 2024 – May 2026

Concrete Engine: Express.js, MongoDB, GCP, Docker, NAS

West Lafayette, Indiana

- Architected a fault-tolerant, tick-based pipeline to replicate and sync customer data (including intermediate artifacts) to all active NAS nodes via GCP, ensuring seamless failover across HPC rigs.
- Developed a comprehensive observability infrastructure for High-Performance Computing rigs, to monitor real-time system health/performance across 50+ distributed nodes. Reduced incident detection time by over 40%.
- Created an automated secure workflow for dynamic environment creation, allowing users to clone GitHub repos, by auditing Dockerfiles, building container images, and uploading artifacts to Google Cloud for future HPC tasks.

Software Engineer Intern

Feb 2025 – May 2025

Vertikal X: Nest.js, PostgreSQL, GraphQL, Docker, Python, HuggingFace

Remote - Austin, Texas

- Implemented a scalable TypeORM backend, leveraging DTOs and GraphQL resolvers for PostgreSQL integration.
- Authored a proprietary scoring algorithm to track athlete performance, social presence, and predict future stars.

PROJECTS

Sift | *Python, PySide6, Qdrant, Qwen3-VL, Whisper, CLAP*

Feb 2026

- Led creation of a local-first multimodal semantic search engine to retrieve data using natural language intent.
- Embedded an innovative cross-modal projection layer to unify heterogeneous data into a shared vector space.

Pathwise | *Next.js, GCP, Firebase, Vertex AI, BigQuery, NLP, BeautifulSoup, Puppeteer*

Aug 2025 – Dec 2025

- Spearheaded development for a web-app using AI-driven insights to personalize and enhance students' college experience by suggesting courses, clubs, events, and research labs, tested and recommended by like-minded seniors.

RESEARCH EXPERIENCE

ML for Theatrical Prop Navigation and Directionality Decisions

Feb 2025 – Aug 2025

Purdue University, under Prof. Rich Dionne, Dean of Theatre

West Lafayette, IN

- Developed state-of-the-art CV models for extracting prop locations and stage layouts from theatrical blueprints.
- Leveraged YOLOv8 and Hough Transform models to facilitate human, object, and path detection.
- Implemented reinforcement learning-based navigation for dynamic, sentient movement of autonomous stage props.

SKILLS SUMMARY

Languages: Bash, C/C++, Dart, Java, JavaScript, TypeScript, Python, R, SQL.

Frameworks: [Next, Express, React].js, Flask, REST, Flutter, Docker, Firebase, MongoDB, PostgreSQL, Unity, AWS.

Libraries: Requests, Pandas, NumPy, Matplotlib, PyTorch, TensorFlow, Keras, OpenCV, Scikit-Learn, LangChain.
